CSCI 1311 Discrete Structures I Spring 2023

Prof. Adam J. Aviv (GW)

Lec 04:Logical Implications

1 / 20

## **Conditional Statement**

If a person is a student at GW and then the student will take CSCI 1311.

This sentence is a conditional statement because the truth of the outcome r is condition on the truth of the condition  $p \wedge q$ 

Prof. Adam J. Aviv (GW)

Lec 04:Logical Implications

2 / 20

### Implication $\rightarrow$

### **Definition**

If p and q are statement variables, the conditional of q by p (read "If p then q" or "p implies q" and written  $p \to q$ ) is false whenever p is true and q is false, and true otherwise.

$$\begin{array}{c|cccc} p & q & p \rightarrow q \\ \hline F & F & T \\ F & T & T \\ T & F & F \\ T & T & T \\ \end{array}$$

#### **Definition**

In an implication,  $p \to q$ , we describe p as the hypothesis (or antecedent) of the conditional and q as the conclusion (or consequent).

# Implications in English: $p \rightarrow q$

If you are a CS major, then you have to take Discrete Math.

- $\bullet \ \, \mathsf{false} \to \mathsf{false}$ 
  - You are not a CS Major, you do not have take Discrete Math.
  - ▶ True. You do not have to take Discrete Math if you are not a CS major.
- $\bullet \ \, \mathsf{false} \to \mathsf{true}$

You are not a CS major, you do have to take Discrete Math.

► True. Some non-CS majors have to take discrete math.

The conclusion can be true even when they hypothesis is false.

• true  $\rightarrow$  true

You are a CS Major, you do have to take Discrete Math.

- ► True. All CS majors do take discrete math.
- true  $\rightarrow$  false

You are a CS Major, you do not have to take Discrete Math.

False. A CS major must take Discrete Math.

The conclusion cannot be false when they hypothesis is true.

Prof. Adam J. Aviv (GW)

Les Mulegisal Implications

### **Vacuous Truths**

### **Definition**

A conditional statement that is true by virtue of the fact that its hypothesis is false is described as vacuously true or true by default

### Example

The conditional statement

If you are a CS major, then you have to take Discrete Math.

is vacuously true If you are taking Discrete Math but you are not a CS major. The hypothesis that you are CS major may be false, but the conclusion is still true.

Prof. Adam J. Aviv (GW)

Lec 04:Logical Implications

# Implication Truth Table

| Нур.     | a | Conc. | n \ -a        |
|----------|---|-------|---------------|
| <i>P</i> | q | 19    | $p 	o \neg q$ |
| F        | F | T     | T             |
| F        | Т | F     | T             |
| Т        | F | T     | Т             |
| Т        | Τ | F     | F             |

rof. Adam J. Aviv (GW)

Lec 04:Logical Implications

C / 20

## **Exercises**

Construct a truth table for the following implications:

$$\neg p \rightarrow q$$

$$p \lor \neg q \to \neg q$$

Note that  $\rightarrow$  order of precedence is the lowest:  $(), \neg, \wedge, \vee$  and then  $\rightarrow$ 

# Logical equivalences with $\rightarrow$

We can show equivalences with  $\to$  using truth tables, as it is like other logical operators, for example.

$$p \lor q \to r \equiv (p \to r) \land (q \to r)$$

| р | q | r | $p \lor q$ | $p \lor q \to r$ | $p \rightarrow r$ | q  ightarrow r | $(p \rightarrow r) \wedge (q \rightarrow r)$ |
|---|---|---|------------|------------------|-------------------|----------------|--|
| F | F | F | F          | Т                | Т                 | Т              | Т  |
| F | F | Τ | F          | Т                | Т                 | Т              | Т  |
| F | Т | F | T          | F                | Т                 | F              | F  |
| F | Т | Т | Т          | Т                | Т                 | Т              | Т  |
| Т | F | F | Т          | F                | F                 | Т              | F  |
| Т | F | Т | Т          | Т                | Т                 | Т              | Т  |
| Т | Т | F | T          | F                | F                 | F              | F  |
| Т | Т | Т | Т          | Т                | Т                 | Т              | Т  |

Can you convince yourself in plain English why this equivalence is true?

# Logical equivalent statement for $\rightarrow$

But, anything we can prove with a truth table, we should be able to show via equivalent statements.

Consider the truth table for p o q

| p | q | p 	o q |
|---|---|--------|
| F | F | Т      |
| F | Τ | Т      |
| Т | F | F      |
| Т | Т | Т      |

Can we write a statement to represent implication without  $\rightarrow$ ?

Prof. Adam J. Aviv (GW)

Lec 04:Logical Implications

0 / 20

## Logical equivalent statement for $\rightarrow$

 $p \rightarrow q$ , is false when p is true and q is false, and true otherwise.

negated gives us all true cases

$$\frac{\neg(\underbrace{p \land \neg q})}{\text{Test for false case}} \equiv p \to q$$

Further simplified using De Morgan's law

$$\neg p \lor q \equiv p \to q$$

rof. Adam J. Aviv (GW)

Lec 04:Logical Implications

10 /00

# Negating an Implication

What is a logically equivalent statement to

$$\neg(p \rightarrow q)$$

 $p \to q$  is false when q is true and p is false, and true otherwise So  $\neg(p \to q)$  is false when q is true p is false, and false otherwise.

$$eg(p o q) \equiv \underbrace{
eg q \wedge p}_{ ext{Test for the false case}}$$

## **Exercise**

Write the equivalent logical statement for the following implications, without  $\rightarrow$ . Recall that  $p \rightarrow q = \neg p \lor q$ . Try and simplify as much as possible.

$$p \land q \rightarrow \neg r$$

# Contrapositive

#### **Definition**

The contrapositive of a conditional statement, "if p, then q" is "if  $\neg q$ , then  $\neg p$ ."

A conditional statement is equivalent to its contrapositive.

$$p o q \equiv \neg q o 
eg p$$

Prof. Adam J. Aviv (GW)

Lec 04:Logical Implications

13 / 20

### Only-if

Consider the phrase:

p can take places only if q takes places, or rephrased, if q does not take place, then p cannot take place.

$$\neg q \rightarrow \neg p$$

That's just the contrapositive!

$$\neg a \rightarrow \neg p \equiv p \rightarrow q$$

#### Definition

The statement p only if q is equivalent to  $p \rightarrow q$ 

rof. Adam J. Aviv (GW)

Lec 04:Logical Implications

## **Biconditional**

Suppose we have an implication in both directions,

You are a CS major only if you take discrete math 
$$\frac{p}{q}$$

and

You take discrete math only if you are a CS major 
$$\frac{p}{q}$$

In logic, this is written

$$(p \rightarrow q) \land (q \rightarrow p)$$

and described as a biconditional.

# $\textbf{If-and-only-if} \, \leftrightarrow \,$

A biconditional can be rephrased as an "if and only if" statement

You are a CS major if and only if 
$$\underbrace{\text{you take discrete math}}_{q}$$

Written  $p \leftrightarrow q \equiv (p 
ightarrow q) \wedge (q 
ightarrow p)$ 

### **Sufficient Conditions**

We can also write the phrase

Being a CS major is a sufficient condition to take discrete math 
$$\frac{p}{q}$$

In other words, p being true is a sufficient for it to be the case that q is true, but q could be true without p.

This is the same as "if p, then q" or  $p \rightarrow q$ .

Prof. Adam J. Aviv (GW)

Lec 04:Logical Implications

17 / 20

### **Necessary Conditions**

If we were to write the following

Being a CS major is a necessary condition to take discrete math 
$$\frac{p}{q}$$

In other words, p must be true for q to be true, or put another way, if p is not true (or false) then q must be false.

This is the same as "if not p, then not q" or  $\neg p \rightarrow \neg q$ .

Prof. Adam J. Aviv (GW)

Lec 04:Logical Implications

. . . . . .

## **Necessary and Sufficient Condition**

If we were to write the following

Being a CS major is a necessary and sufficient condition to take discrete math

We are saying both "if p, then q" and "if not p, then not q"

$$(p \rightarrow q) \land (\neg p \rightarrow \neg q)$$

by the contrapositive

$$(p \rightarrow q) \land (q \rightarrow p) \equiv p \leftrightarrow q$$

A necessary and sufficient condition is an if-and-only-if statement.

### **Exercises**

Convert the following plain language sentences into logical statements.

- **(A)** Having a BS or BE is a sufficient condition for having a bachelors degree.
- **(B)** A person turns 10 years old today if and only if that persons birthday is today and it was 10 years ago.
- (C) If 10 people are in a car and the car is small then it is a clown car.
- (D) It is necessary to write term papers to pass a history class
- **(E)** Taking all the requires classes and submitting for a CS degree is a necessary and sufficient for earning a CS degree.
